Expert Energy Tasmania

Getting Started

Your system must already be registered in Sunny Portal (Done by the installation date).

Download the: SMA ENERGY app from your App store (Apple) or Play Store (Android)

Log in with the same e-mail and password as Sunny Portal.

The app shows the key energy data of your SMA system:

- Generation.
- Consumption Battery / grid.
- Lets you view history.
- Controls e-mobility charging. ✅

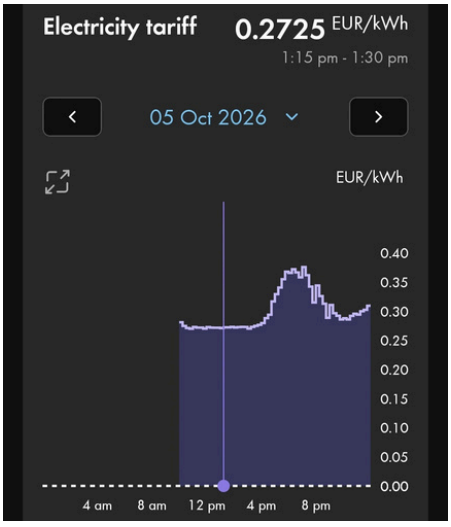

USEFUL TIP
Enable Face ID / Touch ID login in the app or phone settings if offered. / IA Demo mode exists if you want to explore without live data.

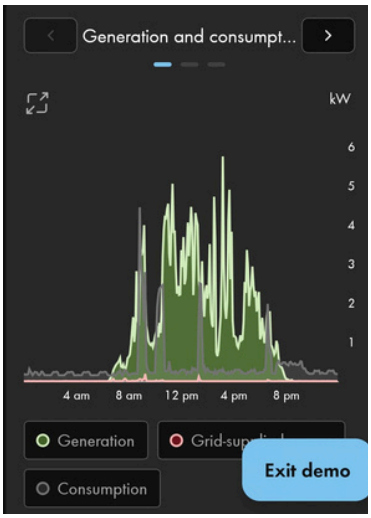

PRICE TREND

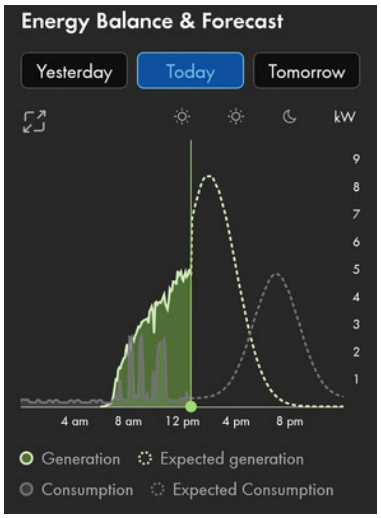

The Price Trend shows how electricity prices change over time and helps you understand when electricity is cheaper or more expensive.

Depending on your system setup, it may show time-of-use pricing such as peak and off-peak periods, estimated costs for importing electricity from the grid, and the value of exporting solar energy back to the grid.

This information is used to show when electricity costs more or less, helping you understand the best times to use energy, run appliances, or charge and discharge your battery if those features are enabled.

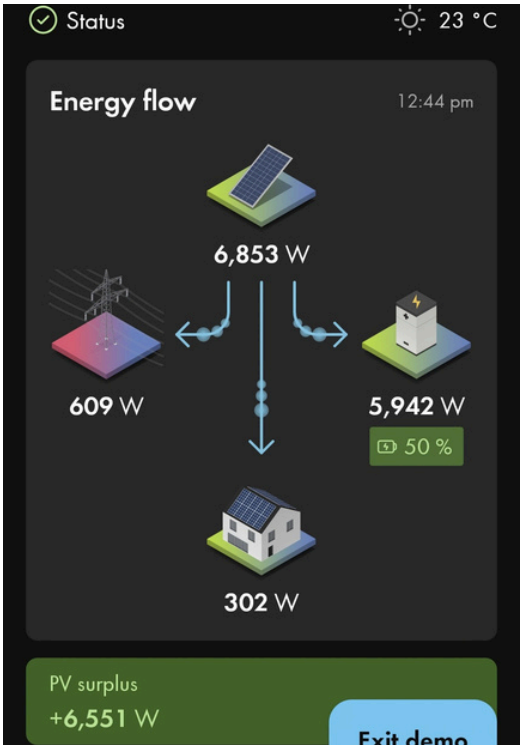

The **Statistics** section shows your system's past performance over time.

It allows you to view how much solar energy your system has produced, how much energy your home has used, how your battery has charged and discharged, and how much energy has been imported from or exported to the grid.

This section is useful for understanding how your system performs day to day and over longer periods, and for seeing overall trends in energy usage and savings.

System

The **Topology** view shows how your solar system is connected and how electricity is moving between each part of the system in real time. It displays the relationship between your solar panels, inverter, battery, home, and the electricity grid.

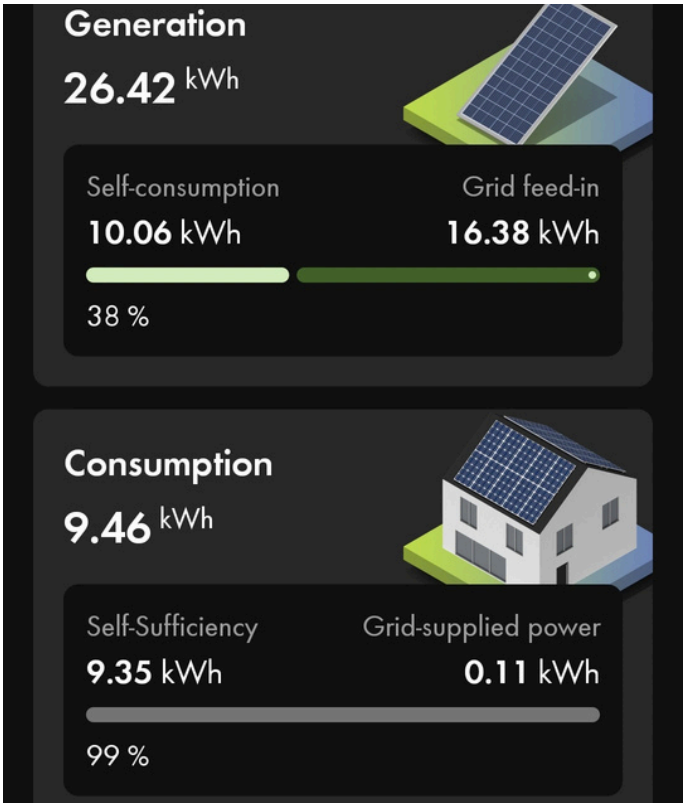

This view typically includes the solar panels, inverter, battery storage, household energy use, and grid connection, all shown as part of a single system layout.

It helps you understand where your power is coming from and where it is going at any given time. This view is mainly used for system overview and technical reference rather than day-to-day monitoring.

Scenario provides an easy-to-understand overview of how your system is operating in real time, showing where your home's electricity is coming from and how it is being used.

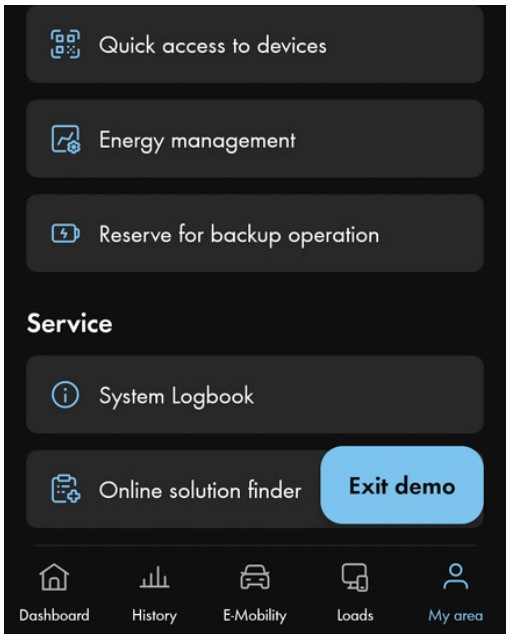

This screen typically displays your home, solar panels, battery storage, and grid connection, along with the energy flow between each part of the system.

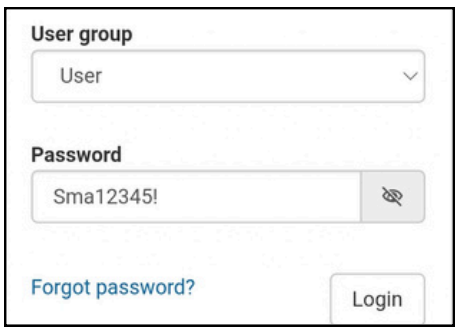

Animated arrows and live values show where energy is currently being generated, stored, or used throughout the home. This view is designed for simple, day-to-day monitoring.

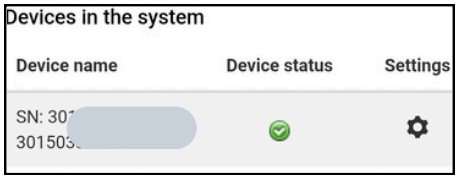

Connecting Your Inverter to Wi-Fi

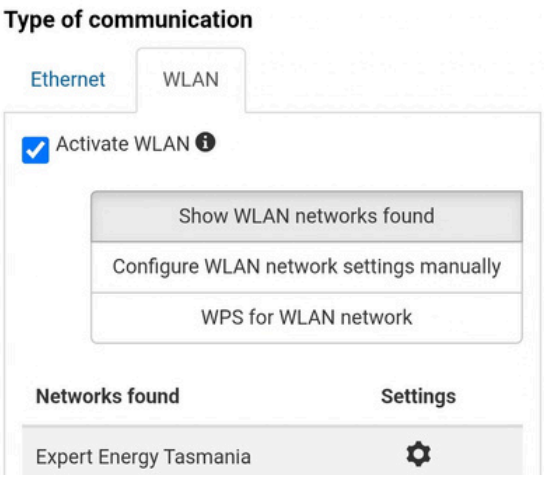

- From the main app screen, select **My area,** at the bottom.
- Select **Quick access to devices.**
- Allows access to the camera in your device
- Scan the QR code in front or side of your INVERTER

- Login with your Setup user password (Sma12345!)
- Tap in **Device configuration**
- Select your inverter from the list of available devices
- Tap in Setting's icon.
- Scroll down to 'Type of Communication and activate.
- Choose your Network and enter your WIFI password

- Save the settings and allow the inverter a few moments to connect.

Note: For the best chance of a successful connection, make sure your choose a strong signal neither your router or your WIFI Booster (if you have one).
